All the above mentioned project were developed under the guidance of

Faculties Mr. Gagan gurung , Mr. Rahul shah and Mr. Dhiraj Jaiswal.

The projects will be formally launched in the month of August by IUS Incubation center, Icfai university sikkim.

ICFAI University develops bus ticket booking app, accommodation search website

ISABELLA GURUNG

GANGTOK, July 17: As part of their annual internship, the IT students of ICFAI University here have developed a mobile app, a software and two web-based applications.

A bus ticket booking mobile app, an accommodation search website, a web-based attendance management system and a software for practical approaches of networking were developed under Summer Project, the annual internship programme organised by the university during the months

of May-June.

The four projects were developed by students of the Department of Information Technology with support from ICFAI University Sikkim Incubation Centre.

The students made presentations of the above products at an event organised in the university today.

The online ticket booking app, 'Hamro SNT' is an android-based informative and booking app created by the 1st year MCA students. The primary idea is to provide information on bus fare, location, bus and driver's

details, number of buses available among others. It will give an easy access to the commuters by providing timing and location of the bus, the student creators of the app said.

"The app provides online booking and payment facilities to the users. It will also provide information about the tourist locations of the State," they informed. Officials from Sikkim Nationalised Transport were also present at the event.

The accommodation search website, 'Hamro PG', designed by 1st year BCA students, aims to ease the difficulty of

employees and students in searching a place to stay in Gangtok. So far, 8-10 students have already registered in the website, it was informed.

The Hamro PG website along with the bus ticket booking app will be available to the public.

The attendance management system software development by the 2nd year BCA students keeps track of the attendance of the employees and leave applications of departments under National Informatics Centre.

Another software has been

designed for complete study of various networking technologies that are used in NIC and other government agencies.

All the projects were created under the guidance of faculties Gagan Gurung, Rahul Shah and Dhiraj Jaiswal.

The dignitaries present praised the students for their creations.

Educationist Prashant Chettri said the 'Hamro SNT' app will solve the problem of traffic congestion and the focus on public transportation will also reduce pollution. "We are proud of the students of

ICFAI," he stated.

The projects will be formally launched by the university in August.
